APPLICATION INSTRUCTIONS

SUBSTRATE PREPARATION

- All surfaces must be clean, free from frost, standing water and all loosely adhering particles. Cement laitance must be removed.
- Concrete must be at least 3 - 6 weeks old, depending on climate, wire-brush, sand-or water-blasted or grind substrates.

MIXING

- Mix components (A+B) together for at least 2

minutes with a mixing paddle attached to a slow speed electric drill (max. 600 R.P.M.) until the material becomes smooth in consistency and even grey colour of the mixture is obtained.

- Material in industrial packing must be stirred well before proportioning and mixing.
- Avoid aeration while mixing.

APPLICATION METHOD / TOOLS

1. When using a thin film adhesive, apply the mixed adhesive to the surfaces with a trowel, spatula or by glove-protected hand.
2. When applying as a repair mortar, take into account

any form work that may be required.

3. On vertical surfaces it is non-sag up to 10 mm thickness.
4. On damp surfaces, ensure that the material is well rubbed in.
5. Max. layer thickness: 30 mm.

CLEANING OF TOOLS

Clean all tools and equipment immediately after use with Colma-Cleaner.

LIMITATIONS

Optimal working temperatures for each grade are:

- Normal Type : 10°C - 30°C.
- Rapid Type : 5°C - 15°C.
- L.P. Type : 20°C - 40°C.

When working at a higher temperature than recommended, the pot life will be shortened. Similarly when working at lower temperatures, the material will become more difficult to apply and takes longer to harden. When applying to damp concrete, work well into substrates.

When the working temperature will be above 45°C, please consult our Technical Service.
