Sika Waterbars®

Construction

| Product | Flexible Soft PVC-Waterbars | s to seal construction and expansion joints in concrete | | | |
|---------------------------------------|--|---|--|--|--|
| Description | structures. Sika Waterbars [®] are available in different sizes and types, depending on | | | | |
| | their use. | | | | |
| Uses | Sika Waterbars [®] are used to seal construction and expansion joins in water | | | | |
| | retaining structures such as reservoirs, water towers, dams, spillways, canals, | | | | |
| | swimming pools, sewage ta | nks etc as well as to keep water out of concrete | | | |
| | structures such as basement | ts, underground car parks, tunnels, subways retaining | | | |
| | walls etc | | | | |
| Advantages | Multirib sections of the tort | uous path principal. | | | |
| | High quality PVC for long durability. | | | | |
| | Suitable for high water pressure. | | | | |
| | Easy to install (clip fastening), easy to weld on site. | | | | |
| | Many different sizes and types available, depending on their use | | | | |
| | Factory produced cross sections available. | | | | |
| Standards/Approvals | Sika Waterbars [®] have been t | tested in accordance to: | | | |
| | BS. 2571 | | | | |
| | ■ DIN 18541, Part 2 | | | | |
| | US. corps of Engineers: CRD-C 572 | | | | |
| | ■ ASTM D-412 & ASTM D-638 | | | | |

Application Selection

The selection of a suitable waterbar is governed by the type of joint, concrete thickness, grade of concrete, reinforcement position, expected movement (expansion/shear) as well as waterhead to which it is to be exposed to

General Guide lines:

Experience has shown that application of a few simple rules will ensure a satisfactory result:

- The overhall width of the waterbar should be at little less or equal to the thickness of the concrete slab into which it is placed.
- The overall width of the waterbar should be at least six times the size of the largest aggregate used.

Installation/Fixation

<u>Centrally Placed Waterbars:</u> Installation in the centre of the concrete structures. Easy anchoring of Sika Waterbars to reinforcement with special fixing clips (5 pieces per m). Surface Waterbars

Installation on the surface of the formwork or on the surface of the base/drylean concrete.

Joint Finishing Types

Installation by pushing onto the formwork or onto the joint lining.

Proper fixing of the waterbars to the reinforcement (or formwork) is essential, as are the careful pouring and compaction of the concrete. Fixing clips for internally placed waterbars are available.

Centrally placed types

Correct

| Welding Waterbars | Sika Waterbars[®] are made from virgin thermoplastic PVC and can therefore be welded easily. The ends are secured in a welding jig (available for each type) and heated with suitable welding equipment (also available), until an even, molten bead of PVC appears. The welding equipment is then removed and the molten ends pressed together firmly. Junction pieces can easily be manufactured on site. However, a wide range of standardized, factory made junction pieces, are available. All having a 30 cm free wing allowing easy butt-welding at site.For non standard junction pieces drawings must be provided, giving exact details required. Material requirement and number and type of welding. | | | | | | |
